

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

# An Introduction to CYTOLOGY

By LESTER W. SHARP

*Assistant Professor of Botany, Cornell University*

452 pages, 6 x 9, 159 illustrations, \$4.00

**McGraw-Hill Agricultural and Biological Publications**

A book for students of the biological sciences who desire a means of becoming more readily acquainted with the literature and problems of cytology. Throughout the book attention is focussed upon the protoplast; the cell wall is given only brief consideration, since it plays a relatively minor role in the processes of particular interest to the cytologist at the present time. Because of their fundamental importance in connection with the problems confronting the geneticist, the phenomena of nuclear division, chromosome reduction, and fertilization are described with considerable fullness, and their relation to the problems of heredity is taken up in five special chapters.

*Professor Charles J. Chamberlain, of the University of Chicago, says of this book:*

"Such a book has long been needed by botanists and also by specialists in genetics, plant breeding and pathology. Professor Sharp has an international reputation as a cytologist. There is no botanist in the world better qualified to write such a book."

*Professor R. A. Emerson, of Cornell, says:*

"It is fortunate that we have in America a cytologist who is thoroughly familiar not only with both plant and animal cytology but also with the bearing of cytology on the problems of heredity. I regard the chapters on the interrelations of cytology and genetics as without exception the best presentation of the subject I have seen."

# *The Little Things That Count Big In Owning Your Own Greenhouse*

Ever gone into a hat store, knowing exactly the kind and shaped hat you want; and then have some smart Alec of a salesman try to sell you the kind HE likes?

Makes a fellow madder than a wet hen, doesn't it?

Suppose, however, that same salesman had told you something about some of his hats that meant

better service to you—more satisfaction for your money—you then sort of feel towards that salesman as you would an old friend.

Salesman number two is our sort when it comes to selling a greenhouse.

We do sell greenhouses, but we first sell satisfaction.

Catalog for the asking.
